

AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph [0096] with the following rewritten paragraph:

[0096] Such undulating protrusions 1106 may be formed from an aluminum strip with a thickness T of about 0.012" and a width W of about 0.30". The undulations 1104 in this example have a height H of about 0.55" and a spacing S between the protrusions 1100 of about 0.05". Using there values for the width W , the thickness T , and the height H yields an aspect ratios ~~of about 8.1~~, as follows:

$$\text{Aspect Ratio} = \frac{H}{\sqrt{T \times W}} = \frac{.55}{\sqrt{.012 \times .30}} = \frac{.55}{.06} = 9.1$$

or, using the dimension $H = .5$

$$\text{Aspect Ratio} = \frac{.55}{.06} = 8.3$$
